COMMONWEALTH OF PENNSYLVANIA
DEPARTMENT OF AGRICULTURE
HARRISBURG

April 18, 1962

Dr. William L. Henning, Secretary
Pennsylvania Department of Agriculture

Dear Sir:

In compliance with provisions of various laws related to certain agricultural materials, there are submitted herewith the results of analyses of official samples of commercial feed, fertilizer, and liming materials taken during 1961.

The samples herein reported represent various lots of products offered for sale by the dealers of the Commonwealth. They were taken by official methods by agents of the Pennsylvania Department of Agriculture and were analyzed by methods of the Association of Official Agricultural Chemists.

The report also includes production, registration, and other information believed to be of value to those interested in the agricultural aspects of our Commonwealth.

Respectfully submitted,

A handwritten signature in cursive script that reads "Delmar K. Myers".

Delmar K. Myers, Acting Director
Bureau of Foods and Chemistry

COMMERCIAL FEED, FERTILIZER, AND LIMING MATERIALS

REPORTS FOR THE YEAR 1961

INTRODUCTION

The Pennsylvania Department of Agriculture is required by law to make regular inspections of commercial feed, fertilizer and liming materials offered for sale with the Commonwealth. Results of inspections for the calendar year 1961 are summarized in this publication.

This report is not to be interpreted as an evaluation of feed formulas or feeding practices. Similarly, the reports on fertilizer and lime are only an indication as to the agreement existing between the guarantee as stated and the actual amount of the guaranteed component found to be present.

Inquiries as to the suitability of the various agricultural products for a specific purpose, should be directed to the College of Agriculture of The Pennsylvania State University or your local County Agricultural Agent.

The Pennsylvania Commercial Feed Law and the Pennsylvania Fertilizer Law follow closely the Uniform Model Bills which were prepared by national committees consisting of experienced control officials and representatives of related industries. Slight modifications of the uniform proposals better fit the laws to the needs of Pennsylvania agriculture, but the similarity with the laws of neighboring states is sufficient to avoid serious problems for the manufacturer engaged in interstate commerce.

During 1961, the Bureau of Foods and Chemistry analyzed 4,354 official samples of commercial feed which were secured by its agents. This represents a slight increase over the number of samples analyzed during the previous year. The program will continue at about this level as it represents the approximate capacity of our present laboratory facilities. In addition to the routine analysis for the determination of crude protein, crude fat, and crude fiber, the analytical work included a check on the level of drugs present in medicated feeds. Additional drug assays as well as hormone, antibiotic, and vitamin work are constantly being added to this phase of our expanding program.

A total of 1,238 fertilizer samples were analyzed during 1961, representing a slight increase over the previous year. No further expansion of this control program is planned until the proposed new laboratory facilities are occupied.

The control program is an assurance of a better enforcement program and of greater service to the manufacturer and the farmer. Two important factors are the initiation of sampling on a year-around basis together with the fact that the inspectors have successfully qualified by passing an examination of the State Civil Service Commission.

The control program has two basic purposes:

- (1) To assure the farmer of a quality product.
- (2) To make certain that manufacturers compete fairly with each other.

Only the fact that the vast majority of manufacturers conduct their businesses at a highly ethical level insures the program of any degree of success.

Advances in animal nutrition have been remarkable in the past few years. The one-time philosophy based solely on protein, fat and fiber has been replaced by a feeding program that includes the use of vitamins, minerals, antibiotics, hormones, and other medicaments. These newcomers to the field of animal nutrition require surveillance as they are often present in minute amounts, which of necessity must be uniformly dispersed through the feed. These changes represent in the eyes of most feeders a considerable improvement in feeding practice and generally result in better feed for the more efficient production of meat, milk, eggs, and fiber.

During the year 1961 a total of 595 samples of feeds guaranteed to contain a specific level of medication were collected as a part of the feed control program. Of these, 578 were analyzed for their drug content. The other 17 contained a drug that was encountered only once or twice during the year and it was not considered important enough to obtain the specialized chemists and equipment necessary to assay them. The 578 feeds contained a total of 705 guaranteed drugs, since some feeds include as many as three drugs. 455 of the drugs were present at levels sufficiently close to the guaranteed amount to consider them to be in substantial compliance with the guarantee. 115 were found present at levels below the guarantee and in each case the manufacturer was advised of the deficiency. Only 8 were found to seriously exceed the guaranteed amount and the manufacturers of these were also notified.

The use of these medicants in feeds is not a substitute for sound management and sanitation in the production of meat, milk and eggs. Neglect of good management principles can overcome all the benefits gained by the use of medicated feeds. For example, the poultry industry has made great strides in the years since World War II. One important factor has been the development of coccidiostats capable of keeping this disease in check. As is true in many other areas, those who believe that if a little does a good job, more will do better, have run into difficulties. It is important that in addition to sound management practices, medicated feeds must be used intelligently and according to and at the levels recommended by the manufacturer. READ THE TAG ranks with TEST THE SOIL as a slogan all farmers would do well to heed.

COMMERCIAL FEED TONNAGE AND FEED CONTROL FEE REMITTANCE
FOR THE YEAR ENDING DECEMBER 31, 19__

Note--Regulation 504. The Feed Control Fee shall be paid only on mixtures of ingredients. Individual ingredients such as wheatbran, oil meals, etc., are not subject to the Feed Control Fee, but must be registered, and an annual statement of the tonnage sold in Pennsylvania reported on forms provided by the Secretary of Agriculture. The Feed Control Fee shall be paid on all mixtures of ingredients, including premixes, supplements, and concentrates offered for sale.

Make remittance payable to the:
COMMONWEALTH OF PENNSYLVANIA

The undersigned hereby states that he believes to be complete and correct this report of tonnage on all commercial feeds sold in Pennsylvania and subject to the Pennsylvania Commercial Feed Law of 1956 for the period indicated above.

FEED AND FERTILIZER CONTROL DISTRICTS

THE LABELING OF MEDICATED FEEDS

Joint efforts of the Federal Food and Drug Administration, the Association of American Feed Control Officials and the American Feed Manufacturers Association have resulted in a revision of the style of labeling on medicated feeds. The Pennsylvania Department of Agriculture, Bureau of Foods and Chemistry, an active member of the Feed Control group, considers the format and style of these tags acceptable and urges their use by all feed manufacturers. They represent a simplification of the former unnecessarily complicated labels and at the same time allow each manufacturer an opportunity to more adequately identify his feeds by emphasizing his brand name.

The following information is intended for use as a guide in preparing labels for medicated feeds. The brand names and miller are intended to be fictitious and the specific names of drugs on these sample labels are given for purposes of illustration only and no endorsement is implied.

TYPES OF LABELS

Labels for medicated complete feeds generally fall into 4 different types, as follows:

Type 1 is for a feed which contains drug(s) for growth promotion and/or disease prevention, and which is to be fed continuously for an indefinite period. The product name is followed by the word "medicated" in letters at least half as tall as those of the product name. This type of label can be used for any drug-containing feed not included among the other types. Exempted from medicated labeling are feeds which contain non-therapeutic levels of antibiotics (those with less than 50 grams per ton usually qualify), since these are not classed as medicated feeds.

Type 2 is for a feed which contains drug(s) at the treatment level, to be fed as the sole ration for a limited period of time. The word "medicated" appears in the forepart of the product name, in letters of same size as remainder of product name.

Type 3 is for a feed which contains hormone(s) or hormone-like substances (e.g., diethylstilbestrol).

Type 4 is for a feed which contains drug(s) at the treatment level for a specific disease or condition. It differs from Type 2 only in that the product name indicates the purpose of the drug and the word "medicated" thus need not be a part of the product name (e.g., "Pig Wormer").

Supplements or premixes which contain drugs and which are to be diluted by mixing with other feeds before use are also covered by these four types of labels. The type of label to be used in each case will depend upon the purpose of the drug and directions for use of the finished feed after such dilution. If the resulting feed when diluted according to directions will contain non-therapeutic levels and no therapeutic claims are made, Type 1 label will be used. If the directions given are such that Type 2 as well as Type 1 can apply, then Type 2 label must be used. Complete directions for feeding are to be included in labeling any feed which may be sold to the feeder either in the original package or in custom-mixed feeds.

The sample labels are intended to illustrate the various types.

FEED INGREDIENT ANALYSES

This chart does not give actual or average figures for feed ingredients, but values that are "safe" for use in calculating the guaranteed analysis of mixed feeds. The protein and fat percentages are a little less than the actual average value and the fiber percentages given are just a little more than the actual average value.

The Pennsylvania Commercial Feed Law requires each sale of feedstuffs to be registered and to be guaranteed as to its composition. The guaranteed analysis should be on each bag or on the invoice in the case of bulk delivery. The manufacturer's guarantees should more closely give the true values for that particular shipment.
